KLW

KLW MACHINE ROOMLESS
PASSENGER ELEVATOR

Released space and infinite innovation

It removes the multiple elevator restrictions at one time

CANNY KLW series, machine roomless elevator removes the elevator's restrictions in construction, construction costs, architectural design style and utilization scopes. In saving space and costs, it brings passengers the efficiency and robustness of the upper wise.

Comparison of various types of elevator machine room

Save Construction Space

CANNY machine roomless elevator puts the entire elevator into the shaft, so that the machine room can exert no limits to the construction, which can save the construction space.

Save construction costs

CANNY machine roomless elevator places the control cabinet in the shaft. And there is no need to build a machine room additionally, thereby saving construction costs.

Optimize Construction Design

CANNY machine roomless elevator saves the space occupied by the machine room, which provides more choices for building design.

Intrinsic strength and extraordinary stability

Brake force self-testing and monitoring function

Test the brake force periodically and autonomously to avoid more accidents by means of fault reminder and no running etc.

New permanent magnetic door machine system

The optimized S-curve, smooth door switch, smaller motor load shock, good self-adaptive control capability can cope with various disturbing factors and realize automatic test, adjust and adapt. The oversized polyurethane rollers have strong abrasion resistance and can achieve muting operation.

A new generation VVVF frequency inverter

A new generation VVVF frequency inverter can adjust the current magnitude and phase according to car load and precisely control the host rotating torque to ensure the stable operation of the elevator.

Inbuilt control cabinet

The control cabinet is placed inside the shaft, so that building reserved holes are removed and the installation will be more convenient; meanwhile, the noise pollution of the machine room can be avoided effectively.

Traction rope sliding detection

Traction rope sliding detection can conduct a real-time monitoring over the data and automatically enter the safe operation mode as required to respond to the emergency by slowing down, so that the elevator accident will not happen.

Electric brake release switch

CANNY machine roomless elevator is specially equipped with the electric brake release switch so that the emergency relief can be more timely and conveniently.

Anticipation, energy conservation and bearing the future

A new generation permanent magnet synchronous gearless traction machine

A new generation permanent magnet synchronous gearless traction machine can save more than 40% of the energy and it is maintenance-free. There is less noise and without need to replace grease.

LED car lighting

LED car lighting device has the advantages such as safety, efficiency, no-radiation, easy maintenance etc.

Dormancy energy saving procedures

In case of no callings, the elevator will start the dormancy energy saving procedures; When there's passenger call, the device will automatically start so as to save the energy consumption during the non-operational period.

Road of respect, follow your heart

IC card intelligent management system(Optional)

IC card intelligentsystem inside the lift car

Equipped with IC card intelligent identification system; the passenger can enjoy convenient travelling experience by swiping card and reaching the destination.

1. Call 2.Read card at entrance floor
3. Select Floor No. in the elevator car 4. Enter the elevator car
- Each floor can be selected for leveling, without pressing any button, it will automatically reach the designated floor of user.

Leveling for power failure (Optional)

When the power grid powers off, the leveling device for powerfailure will power it to the nearest floor so that the door opens.

Group controlling intelligent dispatching system (Optional)

Abiding by the principle of intelligent dispersed principle, carry passengers with highest speed and efficiency.

“Saineng” Energy renewable and feedback technology (Optional)

Transfer the renewable energy into the electric energy and return it to the local power grid for utilization, which reduces 30% of energy consumption.

OTHER OPTIONAL FUNCTION

Long-distance monitor

Pre-open Function

Building automation system

Anti-disturbance Function

Standard design

Integrated operation panel

KL/K4-2001 (Standard configuration)

- Ceiling: KL/DD-4004, Dusting steel plate, hole on center support, LED light source
- Car wall: Hairline stainless steel
- Front wall: Hairline stainless steel
- Vertical column: Hairline stainless steel
- Operation panel: KL231C
- Car door: Hairline stainless steel
- Floor: KL/JD-4004 (PVC)
- Skirting: Hairline stainless steel

San the QR code to know more about the lift car in the 360-degree manner

Optional cars

KL-K 001

Free optional

- Ceiling: KL-D 001, LED car light source
- Car wall: Hairline stainless steel
- Front wall: Hairline stainless steel
- Vertical column: Hairline stainless steel
- Operation panel: KL231C
- Car door: Hairline stainless steel
- Floor: KL-JD 009(PVC)
- Skirting: Hairline stainless steel

San the QR code to know more about the lift car in the 360-degree manner

More optional designs please see CANNY"Elevator Show"

Integrated operation panel

Stanozolol K LW no room passenger elevator, using the shape of the most simple one-piece dashboard, without having to install again, modeling natural, environmentally friendly materials, cost, responsive, and easy to maintain.

Functions

● Standard ● Free optional

Construction parameters

- **Brake detection protection**
Actively and regularly test the brake force; prevent more serious accident by means of malfunction indication and running prohibition and so on.
- **Traction Rope Slide Detection**
It provides real-time monitoring of sliding data, and can automatically enter the safe operation mode for emergency according to requirements.
- **Brake detection protection**
Brake arm detection switch executes real-time monitor to brake opening / closing. If the brake does not open by the requirements, the system will not start the elevator.
- **Protection of none door opening outside door zone**
Automatic door opening is forbidden under none door zone condition.
- **Low-speed protection**
It prevents elevator from low-speed running outside the control range causing any safety problem(s).
- **Overload protection**
Before the elevator shuts the door, if it detects overload signal, the elevator does not shut then, "door-shut button" becomes effective. After it removes overload problem, it re-starts automatically.
- **Automatic parking in trouble**
When the elevator stops in none leveling zone due to any trouble, if it is not caused by safety device action, it executes self-rescue running towards the middle floor direction at low speed. It parks and opens the door at the nearest service floor to prevent from any trapping accident.
- **Protection of elevator blockage**
When the system runs start command, it does not start within preset time nor because it is during the elevator travelling, and it does not reach certain distance within preset time as well, the elevator stops accordingly.
- **Attendant running**
When it is under the operator condition, the elevator system operates according to the car command signal. If landing call signal is available, it automatically cuts as per forward landing call. The door opens automatically after the leveling parking. But it does not shut automatically until the operator presses "door closing button".
- **Fire-fighting return**
When the fire-fighting switch closes, the system enters into fire-fighting running. The system will remove all the landing calls and car command signals, and it automatically returns to fire-fighting home landing, and the door keeps open. If the elevator is travelling in reverse direction, it parks at nearby floor, and returns to fire-fighting home landing with the door keeping closed, after that it keeps the door open.
- **Home landing elevator locking**
When the elevator is under automatic condition, when it shuts home landing locking switch, the elevator will complete all the registered car command services, automatically return to home landing, it enters into parking condition. As soon as locking switch is on, it immediately returns from parking condition and goes into normal running.
- **Cancel the error-register**
If the passenger presses the car command button at certain floor and has registered it by mistake, (by then the car indicating lamp is bright), if under the condition of none elevator running, you only press the car command button at the same floor to cancel the register. (By then the car indicating lamp dies out.)
- **Electrified automatic door-opening**
Every time when the elevator is electrified, if the car is in the door zone, the elevator door opens automatically.
- **Automatic return to home landing**
In non-attendant running, if automatic return function to home landing is still effective, and no-landing call signal time fulfills preset time, the elevator returns to home landing automatically.
- **Automatic stop of the car illumination and fan**
If nobody uses the elevator within certain period of time, the car illumination and fan shut off automatically and re-opens on receiving any landing call command(s).
- **Automatic correction of floor signal**
If the floor display position has error, after the system detects terminal switch in the travel, it will automatically correct the floor display.
- **Cancellation of the reverse command(s) in the car**
When the elevator travels to the farthest floor and changes the speed, it removes all the car command register.
- **Self-diagnostic embedded call button**
If you press call button at certain landing for over 20 second, and it still does not disconnect, the system assumes that it is embedded button. It does not register the landing call of the same floor afterwards. Responsive lamp which corresponds to the button keeps flickering and alarming. When the button disconnects, it exits from above condition.
- **Electric brake release switch**
CANNY machine roomless elevator is specially equipped with the electric brake release switch so that the emergency relief can be more timely and conveniently.

KLW Machine Roomless Elevator Parameter Table

Loading capacity	Rated speed	Door opening width	Door opening height	Width	Car size Depth	Height	Hoistway size		Top floor height	Pit depth	Max.travelling height
(Kg)	(m/s)	(mm)	(mm)		(mm)		Width	Depth	(mm)	(mm)	(m)
450	1.0	800	2100	1100	1100	2250	1800	1700	3800 (3900) / 3850 (3950)	1450	30 / 50

The user's tasks

- It makes the drawing according to the relevant lift technical standard, It needs to be checked and confirmed by the user before it becomes the lift installation proof.
- It shall be embedded in the wall for the machine supporting beam of the traction machine, Then the supporting length shall be 20mm more than the wall center, It shall not be less than 75mm.
- After the installation completion, the ground decoration shall have a proper height step in the sill surface to prevent water or other impurity from entering into the well.
- The casting object in the installation shall satisfy the relevant drawing requirements.
- The buffer base shall be made under the directions of the installers.
